

```
//getClass
```

```
//The getClass is a Method of Java Objects to know which Class belongs to a certain object. With it, we can  
//find out which class a variable belongs to.
```

```
public class GetoClass {
```

```
    public static void main(String[] args){
```

```
        String text = "Gabriel";
```

```
        System.out.println(text.getClass()); // => class java.lang.String
```

```
        //Although, see that, the full name of the object type is returned...
```

```
        //If you want the simple name of the class, use the method getSimpleName...
```

```
        System.out.println(text.getClass().getSimpleName()); // => String
```

```
    }
```

```
}
```
