

```
//WORDS IN JAVA
```

```
//In Java, when we want to write words we can use single quotes or double quotes, but they are different.
```

```
//Double quotes are used when writing strings, a set of characteres.
```

```
//While single quotes are used with single characteres.
```

```
public class WordsInJava {
```

```
    public static void main(String[] args){
```

```
        // See, double quotes are used with strings...
```

```
        System.out.println("Here we have a string"); // => Here we have a string
```

```
        // Have attention that, in Java single quotes are used with single characteres
```

```
        System.out.print('G');
```

```
        System.out.print('a');
```

```
        System.out.print('b');
```

```
        System.out.print('r');
```

```
        System.out.print('i');
```

```
        System.out.print('e');
```

```
        System.out.print('l'); // => Gabriel
```

```
    }
```

```
}
```
